Snow Leopard Maze

Help the snow leopard find its way through the mountain maze! While you work, consider these fascinating snow leopard facts:

1. Some snow leopards have home ranges up to 1000 square kilometers in size. That's a lot of ground to cover! Ask your parent/caretaker what the size of your room is for comparison.
2. Snow leopards have also been known to make long treks out of their home ranges, covering up to 27 miles in a night! What's the longest walk or hike that you've been on, how many miles did you travel in a day?
3. Snow leopards eat slowly, usually taking 3 or 4 days to consume a prey animal and they typically hunt a large animal every 8-10 days on average. What's your favorite food? Would you want to eat it every day, every meal for 10 days?
